

A NEW APPROACH TO younger looking skin

For as long as women and men have been concerned about aging, there have been promises of younger looking skin. Contrary to popular belief, creams and lotions can't penetrate the skin's surface. This means they can't reach the deeper layers of skin where much of the aging process happens.

Now there's **Forever Young BBL™** from Sciton, a **revolutionary treatment using BBL™ technology** to send light energy deep into the skin to boost your body's natural ability to fight the appearance of aging. The result? **Skin that's visibly younger looking, year after year!**

Forever Young BBL is not just for women and men who have experienced sun damage over the course of their life. It also has **Prejuvenation™** benefits **keeping young skin looking young.**

FREQUENTLY ASKED QUESTIONS

WHAT AREAS CAN BE TREATED?

Any area of your body can be treated. The most common areas are those most exposed to the damaging effects of sunlight. Most people ask for treatments on the face, neck, back of the hands, chest and shoulders.

HOW MANY TREATMENTS WILL I NEED?

The number of treatments needed varies from patient to patient, and your clinician will personalize a plan based on the level of improvement you desire.

WHAT WILL HAPPEN DURING THE PROCEDURE?

Your eyes will be protected with safety shields or glasses. Typically, there is no need for a topical anesthetic, however your clinician may choose to use one on more sensitive areas. You may feel a quick, warm sensation as the light is absorbed by the targeted areas. Your procedure may take a few minutes to half an hour, depending on the size of the area to be treated.

HOW LONG WILL IT TAKE TO RECOVER?

This is a non-invasive and gentle procedure with virtually no downtime. In most cases, you are able to apply makeup, return to work and resume most of your activities immediately.

WHAT SHOULD I EXPECT AFTER THE TREATMENT?

You may experience some redness that should resolve within a few hours. For some pigmented lesions, you will see a darkening of the treated area followed by fading and flaking off at a later stage. Your treated skin will feel smoother, pores will be less noticeable, and sunspots or uneven pigmentation will fade. Results depend on your condition, the number of treatments, and the area treated. It is important to follow your clinician's post treatment plan. Your clinician will provide you with more information on what to expect as well as give you an aftercare plan to follow that will involve avoiding direct sun exposure and using sunscreen.

AGING SKIN**

ONLY FOREVER YOUNG BBL IS CLINICALLY PROVEN

to fight the aging process at a deeper level

Forever Young BBL isn't just a beauty treatment, it's a **preventive regimen**—possibly the best investment anyone can make in his or her skin now. Everybody can protect themselves against the sun and environmental damage that adds up over time. In fact, the best time to think about the effects of aging is before they appear.

Results Now. See immediate results for pigmented lesions and vascular lesions.

Results Forever. Imagine taking a photo a decade from now and looking better than you do today. It may sound impossible, but that's what Forever Young BBL can do. It was proven in a 10-year clinical study—one of the longest on record to show the results of a skincare regimen. Most patients received multiple BBL treatments per year for an average of ten years. At the end of the study, doctors judged the patients to appear 11 years younger than their actual age. In other words, they looked younger than when the study began.¹

With almost 550 reviews on realpatientratings.com,

FOREVER YOUNG BBL HAS A RATING OF

90.6% PATIENT SATISFACTION*

“Wow! This is the best investment I could ever make in my appearance. I am 53 and when I tell people I have children that are almost 30, they wonder how much cosmetic surgery I've had done. The answer is none - just **Forever Young!**”
Erica, 53 years old

“I couldn't be happier with my **Forever Young BBL** treatment program - my skin looks better today than it did a decade ago!”
Kathy, 47 years old
